CONTENTS AND ABSTRACTS

TRANSMISSION AND PROCESSING OF INFORMATION

S.N. Kirillov, P.S. Pokrovsky. ALGORITHM OF MODULATION TYPE CLASSIFICATION FOR UNKNOWN RADIO SIGNAL OF SPACE RADIO COMMUNICATION SYSTEMS

Key words: modulation type classification, communication space systems, feature dictionary, decision rule.

Feature dictionary of 10 elements is substantiated, which provides classification stability to the errors determining carrier frequency, bit rate and power of unknown space communication systems signal. Proposed modification of decision rule increases average probability of correct classification by 16 %. Developed algorithm provides average probability of correct classification at least 70 % for a signal-to-noise ratio more than 13.7 dB 3

V.K. Klochko, Ch.T. Nguyen. MATHEMATICAL MODEL OF SYSTEM OF THREE-DIMENSIONAL RADIO IMAGES FORMATION ON THE BASIS OF DOPPLER FILTRATION AND COORDINATES ESTIMATION

Key words: radio image, Doppler filtration, estimation of coordinates.

A mathematical model of Doppler system of supervision over terrestrial surface is given. A method of formation of three-dimensional radio images of terrestrial surface, uniting narrow-band Doppler filtration with algorithms of angular coordinates estimation is offered. Ways to realize this method are shown 11

G.N. Myatov, R.V. Tishkin, V.A. Ushenkin, A.A. Yudakov. APPLICATION OF FUZZY SIMILARITY MEASURES IN THE PROBLEM OF EARTH SURFACE IMAGES COMBINATION

Key words: images combination, mutual correlation function, fuzzy similarity measure.

Applicability analysis of fuzzy similarity measures to the problem of Earth surface images combination solution is made. The solution examples of images combination problem by means of classical mutual correlation function and fuzzy similarity measures are reviewed. Identification of fuzzy measures similarity providing maximum combination accuracy and maximum noise influence stability is realized 18

RADIO EQUIPMENT AND MEASUREMENT SYSTEMS

V.G. Andreyev, V.A. Belokurov, V.I. Koshelev. ANGULAR ORIENTATION ERRORS REDUCTION OF STRAPDOWN NAVIGATION SYSTEM CAUSED BY MEMS GYRO BIAS

Key words: gyro bias, attitude, linear autoregression, time sequences modeling, redefined Yule Walker's equation.

We propose and investigate a method for approximating the bias of MEMS gyro by overdetermined autoregressive model. The model has large (50...150) degree of overdetermination to enable subsequent calculation of a small (2...4) order model. The resulting autoregressive coefficients are included in the fundamental matrix for linear Kalman filtering. This method was used to process data taken by ADIS16405 navigation sensor. The use of second order

overdetermined model increases the precision of roll, pitch and yaw calculation by between 3 and 10 degrees, compared with commonly used one to describe gyro bias by means of first order Markov model 27

V.T. Dmitriev, D.S. Semin, E.V. Akopov, P.I. Manzadey. SPACE DEBRIS ORBITAL PARAMETERS ESTIMATE ACCURACY ALGORITHM BY INTEGRATION OF MEASUREMENT RESULTS

Key words: earth space investigation, trajectory measurements interpolation, data integration, Khurgin-Yakovlev representation.

The algorithm for more accurate assessment trajectory of space debris by integration results obtained from different sources is given. Application of Khurgin-Yakovlev representation while processing trajectory measurements increased the accuracy of interpolation path up to 1.3 times compared to interpolation algorithm based on the theorem by V.A. Kotelnikov 31

E.V. German, A.A. Loginov, M.B. Nikiforov. CLASSIFICATION AND RESEARCH OF UNDERLYING SURFACE IMAGE INFORMATIVITY MEASURES IN CORRELATION-EXTREMAL NAVIGATION SYSTEMS

Key words: informativity, correlation-extremal navigation systems, entropy.

This paper proposes classification and comparison of measures of informativity for correlation-extremal binding of surface images in navigation systems. Actions which best correspond to the problem of correlation-extremal navigation systems are given. It is shown that entropy and image relation "object/background" are the best suitable to solve the stated task 35

A.V. Molchanov, A.E. Serebryakov, M.V. Chirkin. IMAGE WAVELET FILTERING THRESHOLD ESTIMATION TO SUPERPOLISHED SURFACES IN THE RADON SPACE

Key words: wavelet-filtering, Radon transform, one-dimensional defects, filtering threshold, AFM-scan, power spectral density.

Characteristic properties of superpolished surfaces are analyzed by means of wavelet filtering in Radon space images of atomic force microscope scans. Distortions of one-dimensional defects and deviations in power spectral density of residual chaotic relief are identified with mistakes in wavelet expansion separation. Filtering threshold influence on Fourier transform contrast of surface tool marks and correlation of separated images of one-dimensional defects and residual chaotic relief are investigated. The importance of the results obtained as applied to polishing quality integrated assessment of dielectric substrates meant for ring laser mirrors is discussed 40

D.N. Krivchenkov. SUM OF COMPLEMENTARY SIGNALS BASED ON PASCAL TRIANGLE

Key words: autocorrelation function, side lobes, weighting, complementary signals, Pascal triangle, phase shift, Doppler Effect.

The method of processing which reduced the influence of Doppler Effect on result side lobes of compressed complementary signals is considered. A generalized expression of weighted sum of complementary signals and expression of result side lobes level are given 46

COMPUTER ENGINEERING AND APPLIED MATHEMATICS

V.P. Koryachko, D.A. Perepelkin, M.A. Ivanchikova. ADAPTIVE ROUTING ALGORITHM IN CORPORATE NETWORKS OF MULTIPLE COMMUNICATION PROVIDERS

Key words: adaptive routing, routing algorithms, corporate networks, communication providers.

Adaptive routing algorithm in corporate networks of multiple communication providers which increases efficiency of its operation is offered..... 52

V.I. Pobaruev. ORGANIZATION OF EFFECTIVE INTERPROGRAMM INTERACTION IN COMPLEX SYSTEMS BY "ASSOCIATION" INTERFACE

Key words: interface, module, component, interprogramm interaction, entry point, binary compatibility.

A method of interoperability between components of complex software systems, based on the organization of associative relationships is considered. The method allows you to create heritable, fast and easy to implement tools for cross-program interaction. The method proved effective because of its many years of use in implementation of interfaces in large software systems of remote sensing data processing developed at SRI "Photon" 56

COMPUTER-AIDED DESIGN

M.V. Usachev, N.P. Molkov. SIMULATION MODEL OF ARM CORTEX-M3 MICROCONTROLLER FOR SPICE-SIMULATION

Key words: simulation model, microcontroller, SPICE-simulation, debug output, ARM Cortex-M3.

Features to develop microcontroller simulation model are described. The description of generalized simulation model of microcontroller based on Cortex-M3 architecture for SPICE simulation is proposed. A block diagram of the model and the steps to increase the efficiency of debug output for improving software development are defined 61

D.V. Almazov, S.I. Malchenko, V.G. Mishustin, N.B. Rybin. DEVELOPMENT OF ADMITTANCE SPECTROSCOPY COMPLEX METHOD STAND WITH ATOMIC FORCE MICROSCOPY

Key words: nanostructured semiconductors, nanostructures, contact phenomena, admittance spectroscopy, atomic force microscopy.

Automated stand is developed. It implements admittance spectroscopy method with atomic force microscopy (AFM) for investigation of electrophysical properties of nanostructured semiconductor materials and nanostructures. Operating principles and technical characteristics of the stand as well as advantages and limitations of admittance spectroscopy method in combination with AFM are considered. It is shown that combined use of admittance spectroscopy method and AFM technique discovers additional opportunities for experimental investigation of electrophysical characteristics of semiconductor materials. It leads to qualitatively new level of micro- and nanostructure diagnostic methods 66

ELECTRONICS

V.S. Gurov, M.V. Dubkov, M.A. Burobin, O.V. Rozhkov, I.A. Kharlanov. INCREASE OF MASS PEAK INTENSITY OF MONOPOLE MASS ANALYZER WITH LENGTHWISE ELECTRIC FIELD

Key words: monopole mass analyzer, lengthwise electric field, mass peak intensity.

Effect of a lengthwise electric field created by rod electrode slope to the axis, on analytical characteristics of monopole mass analyzer is investigated. It is theoretically and experimentally confirmed that lengthwise electric field, under certain conditions, leads to the increase of mass peak intensity of monopole mass analyzer 73

A.S. Arefyev, G.P. Gololobov, D.V. Suvorov, M.S. Tishchenko. GAS DISCHARGE IN MAGNET CONTACTS AND STATISTICAL DATA

Key words: reed, microarcs, switching voltage, erosion, the contact surface.

There have been given statistic characteristics of second instabilable stage of microarcs in reed-relays, method of their receiving and investigation, also dependency of characteristics from the current and voltage. There have been given empirical formula for calculation of average statistical duration of microarc. There have been studied appearance and conduct of "long" arcs and their influence on contact surface. Recommendations to apply the results concerning the choice of reed-relays operating conditions and material contact surface have been given..... 76

E.G. Chulyaeva, P.G. Vorobiev. MAGNETIC FIELD INFLUENCE ON STABILISED He-Ne LASER BEAT FREQUENCY

Key words: standard meter, He-Ne laser, beet frequency, LGN-212-1M, Zeeman's effect.

Given work presents the research of magnetic field influence of on beat frequency of two-frequency Zeeman He-Ne laser. It is shown that in magnetic system of laser both a longitudinal magnetic field and cross-section one can be found, that under certain conditions leads to dependence change of beat frequency resulting from detuning of optical resonator 82

O.A. Abrosimov, A.V. Gorechy, M.M. Zarubin, A.B. Yastrebkov. METHOD TO OBTAIN QUASIGOMOGENEOUS OPTICAL PUMPING IN DPSS LASERS AND ITS APPLICATION IN TWO-BEAM LASER

Key words: diode pumping, DPSS laser, pump homogeneity, concentration of active ions, laser processing of materials. It is offered:
– method of obtaining quasi-homogeneous distribution of pump radiation on cross-section of active medium in side diode-pump solid-state lasers;
– method to calculate optimum concentration of active ions for active media with triangular cross-section.
On their basis a simple design of two-beam laser was developed. It is shown that two-beam laser can be effectively used for welding of dissimilar materials 87

V.G. Litvinov, A.V. Ermachikhin, D.S. Kusakin. DLTS STUDY OF SCHOTTKY DIODE BASED ON InGaAs/GaAs SQW HETEROSTRUCTURE

Key words: diode structure, quantum well, deep level transient spectroscopy.

Results of emission of charge carriers in Schottky diode Au/GaAs/InGaAs/GaAs with quantum well investigations by deep level transient spectroscopy (DLTS) are discussed. Different measurement modes DLTS-spectra are analyzed. It was shown that activation energy of electron emission from quantum well formally calculated from DLTS-spectra depends on the filling of QW by electrons..... 91

E.V. Mamontov, E.Yu. Grachev, A.A. Dyagilev, V.V. Zhuravlev. ION-OPTICAL SYSTEM OF PLANE DISCRETE ELECTRODES WITH VARIABLE DENSITY OF EQUIPOTENTIAL ELEMENTS

Key words: ion-optical systems, radio frequency linear fields, plane discrete electrodes, RF mass-reflectron, method of average potential.

A problem to form two-dimensional linear electric fields in ion-optical systems with extended along one axis area is solved. A method of solving the problem is in setting along the boundaries of discrete-linear distribution of average potential. Conditions to apply the method of average potential to the design of ion-optical systems with linear electric fields are determined. The results of numerical simulation of radio frequency mass-reflectron with plane electrodes with variable density of discrete elements are given..... 96

A.N. Vlasov, S.V. Zhimoloskin, A.B. Manoshkin, A.V. Nikolaev, V.V. Panin, S.S. Potashevsky. ABOUT FEATURES OF INDUCTIVE ENERGY STORAGE IN EXPERIMENTAL SETUP "INGIR-MEGA-15"

Key words: experimental setup "INGIR-Mega-15", inductive energy storage, magnetic force,

electric explosion of metal, long-lived plasmoid.

A theoretical evaluation of structural strength of inductive energy storage for experimental setup "Inghirami-Mega-15" used to generate pulsed inductive discharge, as well as examples of practical calculations are given. Experimental results which take into accounte recommendations are given, and a plasmoid with a lifetime of 1.6 s is obtained on the basis of use of electrically exploding inductive energy storage having the size 2 cm.....101

CONTROL IN SOCIAL-ECONOMIC SYSTEMS

E.P. Vasiliev, V.I. Oreshkov. DATA CLUSTERING BASED ON SELF-ORGANIZING MAPS IN CONTROL PROBLEMS IN SOCIAL AND ECONOMIC SYSTEMS

Key words: clustering, neural networks, Kohonen network, self-organization, machine learning.

The possibility of clustering, as one of the most powerful tools for data mining, modeling of social and economic processes in search of knowledge needed to improve management efficiency is considered. Promising application of self-organizing maps built on the basis of unsupervised learning is shown. A method to select learning parameters and map configuration by minimizing average distance between objects and clusters centers is proposed. Effectiveness of method is illustrated by solving the problem of clustering of Russian regions by the dynamics of land allocation to agricultural producers.....107

Ju.A. Kovalchuk, I.M. Stepnov. MANAGEMENT OF MODERNIZATION PROCESSES IN HIGH-TECH INDUSTRIES IN THE CONDITIONS OF ECONOMY REINDUSTRIALIZATION

Key words: modernization, reindustrialization, technological way, development institutes.

Tendencies and regularities of post-industrial development in a prism of comparative analysis of economy of world leaders are considered. Preconditions and value of reindustrialization for Russian economic growth are revealed. The problem field and solutions of problems of new hi-tech industrial development on the basis of industry modernization is defined.....114

S.O. Volodina. THE STRUCTURE OF INVESTMENT RESOURCES AS AN ELEMENT OF MANAGEMENT OF INVESTMENT ACTIVITY

Key words: the investments; the structure of the investment resources.

The structure of investment resources considered at macro level and at the level of individual economic units is considered. The advantages and disadvantages of individual resources are given. The structure of investment resources in Russian Federation is analyzed, the dependence between the rate of economic growth, investments and the size of equity and borrowed funds are identified. Measures for optimizing the ratio of equity and borrowed funds are offered.....122
